

Section M:	
Mathematics, Physics, Theory of Circuits, Components	11
Symbols in this book	12
Subscripts and signs for formula symbols in this book	13
Quantities and units	14
Mathematical symbols	16
Exponents, unit prefixes, logarithms, calculations according to the rule of three	17
Angles, trigonometric functions, percentage calculation	18
Relationships between trigonometric functions	19
Lengths and areas	20
Body and mass	21
Mass, force, pressure, moment of force	22
Motion rules	23
Mechanical work, mechanical power, energy	24
Transmissions	25
Pulleys, wedges, winches	26
Heat	27
Charge, voltage, electric current, resistance	28
Electric power, electric work	29
Electric field, capacitor	30
Alternating quantities, wavelength	31
Power of alternating sine-wave current, impulse	32
Magnetic field, coil	33
Electric and magnetic field strengths	34
Current in the magnetic field, induction	35
Resistor circuits	36
Reference arrows, Kirchhoff's rules, voltage dividers	37
Potentiometer	38
Equivalent voltage source, equivalent current source, matching	39
Basic circuits of inductances and capacitances	40
Switching capacitors and coils	41
Series connections of R, L, C	42
Parallel connections of R, L, C	43
Equivalent series connection and equivalent parallel connection	44
Simple filters	45
Three-phase systems (alternating current)	46
Unbalanced load, star-delta conversion, bridge circuit	47
Harmonics	48
Resistors and capacitors	49
Colour marking of resistors and capacitors	50
Types of resistors and capacitors	51
Application groups and structures of capacitors	52
Semiconductor resistors	53
Rectifier terms	54
Diodes	55
Field effect transistors, IGBT	56
Bipolar transistors	57
Thyristor	58
Thyristor types and trigger diodes	59
Types of packages for diodes, transistors and ICs	60
Magnetic field-dependent components	61
Photoelectronic components	62
Protection circuits for diodes and thyristors	63
Cooling of semiconductor components	64
Section TM:	
Technical Documentation, Measuring	65
Graphical representation of characteristics	66
General technical drawing	67
Graphical representation of bodies	68
Dimension arrows, special representations	69
Dimensioning	70
Dimensioning, hatching	71
Circuit diagrams as functional documents	72
Other functional documents	73
Location- and connection-related documents	74
Logic sequence control diagrams	75
Marking in circuit diagrams	76
Code letters for components (objects) in circuit diagrams	77
Code letters for subclasses and infrastructure object classes	78
Subclasses according to the task of an object	79
Contact marking in circuit diagrams	80
Circuit symbols	81
General circuit symbols	82
Additional circuit symbols, switches in energy plants	83
Measuring instruments and devices	84
Semiconductor components	85
Binary elements	86
Analog information processing, meters and tariff switchgears	88
Electroacoustic converters and aerial systems	89
Circuit symbols for installation circuit diagrams and installation diagrams	90
Installation circuit diagram	92
Circuit symbols for overview diagrams	93
Coils, transformers, transducers, rotating generators	94
Single-phase A.C. motors and starters	95
Three-phase motors and starters	96
Motors with A.C./D.C. drive systems	97
Comparison of circuit symbols	98
Hydraulic and pneumatic controls	100
Circuit symbols for the European installation bus EIB	101

Contents

Symbols in process engineering	102	Local operating network LON	145
Preparing documentation on equipment and plant	103	LON components	146
Structure and contents of operating instructions	104	Electrical installations with wireless control	147
Electrical measuring instruments and systems	105	EIB with FSK control	149
Pictographs for measuring	106	Local control network LCN	150
Measuring circuits for resistance calculation	107	House connection with potential equalisation	151
Measuring range extension	108	Residential building installations	152
Measurements in electrical installations	109	Installation of the meter cabinet	153
Measuring circuits using power meters	111	Future-proof installations	154
Electricity meters, kilowatt-hour meters	112	Calculation of circuit loading without branch	155
Electronic kilowatt-hour meters	113	Calculation of circuit loading with branch	157
Oscilloscope	114	Protection of conductors against overload and short circuits	158
Measurements with the oscilloscope	115	Methods of installation for permanent installation	159
Displacement and angle measurement with sensors	116	Ampacity of cables and wires at $\vartheta = 25\text{ }^{\circ}\text{C}$	160
Measurement of force and pressure with sensors	117	Ampacity of cables and wires at $\vartheta = 30\text{ }^{\circ}\text{C}$	161
Motion measurement with sensors	118	Ampacity of flexible or heat-resistant cables	162
Temperature measurement with sensors	119	Ampacity correction factor	163
Working on electrical equipment	120	Minimum conductor cross sections, ampacity of power cables	164
Section EI:		Overcurrent protection devices (low-voltage fuses)	165
Electrical Installations	121	Overcurrent protection devices	166
Workshop equipment	122	Bathrooms with bathtubs or showers	167
Cable installation and working on electrical conductors	123	Special rooms and facilities, working under voltage	168
On-off circuits, series connection	124	Saunas and swimming pools	169
Three- and four-way switch circuits	125	Electrical installations in operational facilities exposed to a risk of fire	170
Automatic switch for staircase lighting, doorbell system with door opener	126	Electrical installations in agricultural facilities	171
Circuits with latching relays	127	Electrical installations in medical areas	172
Louvre-control circuits	128	Electrical installations in teaching rooms with experimental facilities	174
Intercom systems	130	Electrical installations in explosion-risk areas	175
Two-wire door intercom systems	131	Power supply of workshops and machine shops	176
Lamp circuits with dimmers	132	Lighting engineering	177
Push-button dimmer, types of dimmers	133	Design of interior workshop lighting	178
Automatic controller with heat sensor	134	Maintenance factors of workshop lighting	179
Automatic switch with ultrasonic motion sensor	135	Calculation of lighting systems	180
Electrical installations with low-voltage halogen lamps	136	Lighting and glare	181
Field-reducing electrical installations	137	Incandescent lamps, metal-vapour lamps	182
Building management and system engineering	138	Energy-saving lamps, colour reproduction	183
Lines and areas in an EIB/BMS system	139	Induction lamps and optical fibres	184
Components of EIB/BMS systems	140	Fluorescent lamps for 230 V	185
Special actuators and system devices for the EIB (BMS)	141	Electronic ballasts for fluorescent lamps	186
Sensors for the EIB (BMS)	142	Discharge lamp circuits	187
Actuators for the EIB (BMS)	143	LED lighting	188
Project design and commissioning of an EIB system	144	Photometric data of light fixtures	189
		Fluorescent tube systems	190

Section SE:**Safety, Energy Supply** 191

First aid at the workplace	192
Personal protective equipment PPE	193
Signs for accident prevention	194
Signs and colours for accident prevention	195
Distribution systems (network types)	196
Types of contact, current hazards, types of faults	197
Protective measures, protection classes	198
Protection by additional insulation	199
Other system-independent protective measures	200
Protective systems with earth conductors	201
Initial testing of protective measures	203
Repetitive testing	204
Repetitive testing of electrical equipment	205
Repair, modification and testing of electrical equipment	206
Transformers and chokes, insulation testing	207
Calculation of transformers	208
Small transformers	209
Types of power stations	210
Rotating generators	211
Nameplates of transformers and transducers	212
Three-phase transformers	213
Transformers in parallel operation	214
Power mains for energy supply	215
Overhead power lines	216
Sag of overhead power lines	217
Installation of buried cables	218
Private power generating systems	219
Reimbursement for renewable energies according to EEC, wind power stations	220
Photovoltaic systems	221
Photovoltaic array	222
Marks and symbols on electrical equipment	223
Fuel cells	224
Protection of electrical equipment, IP codes	225
Electrochemistry	226
Primary cells	227
Cell batteries, accumulators	228
Charging methods for rechargeable batteries	229
Emergency power supply and emergency lighting	230
Safety power supply systems (SPS)	231
UPS systems (uninterruptible power supply)	232
Electromagnetic compatibility (EMC)	233
Components for surge protection	234
Protection against external surges	235
Electromagnetic interferences EMI	236
Measures against EMI	237
Lightning protection	238

Lightning arrester systems	240
Quality of power supply	241
Reactive power compensation, power factor correction	242
Monitoring of final circuits	244
Alarm and monitoring systems	245
Safety and security systems in buildings	246
Intrusion or burglar alarm system	247
Closed-circuit television CCTV	248
Temperatures relevant to heat demand calculations	249
Heat demand and thermal conduction in buildings	250
Calculation of the heat demand of detached and semi-detached houses	251
Building heating	252
Underfloor and ceiling panel heating	253
Air conditioning	254
Electric cookers	255
Power efficiency classes	256
Water heaters	257
Household appliances	258
Heat pumps	259
Electricity tariffs	260

Section IC:**Information and Communication Technology**

Systems	261
Binary numbers and codes	262
Hexadecimal and octal numbers	263
ASCII code in unicode	264
Binary operations	265
Boolean algebra	266
Development of combinational circuits	267
Code converters	268
Flip-flops (bistable multivibrators)	269
Digital counters and shift registers	270
D/A converters and A/D converters	271
Microcomputers	272
Personal computer PC	273
Visual display units, monitors	274
PC ports and connectors	275
Interface connections	276
Operating system Windows	277
Elements of Windows user interfaces	278
IT networks	279
Components of data networks	280
Communication via ethernet	282
Installation of an ethernet	283
Industrial ethernet	284
Signal transmission	285
Wireless data transmission	286

Contents

Wireless LAN	287	Programmable logic controller PLC	332
Identification systems	288	Signal coupling for PLCs and microcomputers	333
ASI bus system	289	Control statements for PLCs	334
Interbus	290	Program examples for PLCs	336
PROFIBUS, process field bus	291	Counters and timers in PLCs	338
Remote control systems	292	Programming languages SCL (Structured Control Language) and SFC (Sequential Function Chart)	339
Measuring transducers and signal converters for remote control systems	293	Program structure for PLC S7	340
Programmable measuring transducers for remote control systems	294	Alphanumeric identification of connections	341
Connection to the telephone network	295	Control engineering	342
Telecommunication via ISDN	296	Electronic control of electrical consumers	343
Configuration of an ISDN private branch exchange	297	Limit values for loads connected to the national grid	344
Internet access	298	Electromagnetic contactors	345
Internet research	299	Special types of contactors	346
Backing up and protecting data	300	Identification of contactors and control devices	347
Aerials, electrical equipment for aerial systems	301	Utilisation categories and test conditions applying to contactors	348
Satellite reception	302	Contactors circuits	349
Satellite equipment	303	Motor protection	351
Aerial systems for satellite receivers	304	Electronic motor protection	352
Master aerial systems	305	Control via motor switches	353
Installation and safety of aerial systems	306	Optoelectronic proximity switches (light barriers)	354
Broadband communication systems	307	Proximity switches	355
Base circuits of amplifiers	308	Ultrasonic sensors	356
Section AC:		Automatic control engineering	357
Automation, Drive and Control Systems	309	Discontinuous automatic control elements	358
Fundamental principles of the operational amplifier	310	Continuous automatic control elements	359
Circuits with operational amplifiers	311	Automatic digital control	360
Tasks of power converters	313	Setting of control loops	361
Identification codes for converter connections	314	Operating modes and temperature rise limits	363
Circuits for rectifiers and power converters	315	Standard insulation classes, rated powers	364
Bidirectional connection, control characteristics	316	Operating data of squirrel cage motors	365
Operating quadrants for drives, linear motors	317	Surface-cooled squirrel cage motors (standard motors)	366
Semi-controlled power converters	318	Types of construction of rotating electrical machines	367
Fully controlled power converters	319	Calculation formulas for rotating electrical machines	368
Inverters	320	Nameplates of rotating electrical machines	369
D.C. choppers, voltage source inverters	321	Three-phase motors	370
Voltage source inverters VSI	322	Troubleshooting on three-phase asynchronous motors	371
Triggering circuits for semiconductors	323	Single-phase A.C. motors	372
Smoothing and voltage stabilisation	324	D.C. motors	373
Fundamentals of switch-mode power supplies	325	Servomotors	374
Switch-mode power supplies	326	Stepper motors	375
Switching transistors and multivibrators	327	Testing on electrical machines	376
Solid state relays SSR and reed relays (optocouplers)	328	Three-phases windings	377
Small controller EASY	329	D.C. windings	378
Small controller LOGO!	330	Drive systems	379
Structograms and program flowcharts	331		

Selection of the suitable drive motor	380	ISO system of limits and fits	413
Starting of squirrel cage motors	381	Organisational structures of companies	414
Periodic table, chemical bond	382		
Section MC:		Section CE:	
Materials, Connecting, Joining and Bonding . . .	383	The Company and its Environment,	
		Environmental, Technology, Annex	415
Specific material values	384	Teamwork	416
Steel standardisation	385	Preparing a presentation	417
Conducting materials in electrical engineering (nonferrous metals)	386	Realising projects	418
Magnetisation characteristics (B-H curves)	387	Job planning, network planning	419
Magnetic materials	388	Constituents of a collective labour agreement . .	420
Solders, thermal bimetals, carbon brushes	389	Qualifications to perform electrotechnical work .	421
Contact materials, overhead power lines	390	Legal transactions of the company	422
Insulators	391	Costs and key figures	423
Synthetic materials used as insulators	393	Cost accounting	424
Other insulators	394	Preparing a quotation	425
Auxiliary materials	395	Design-of-work and scope-of-work specifications	426
Cables and wires	396	Computer-aided planning of electrical installations	427
Insulated power cables and cords	397	Certification and auditing	428
Power cables and cords	398	CE marking	429
Other cables for permanent installation	399	Terms of environmental engineering	430
Cables for the connection of mobile equipment	400	Hazardous substances	431
Cables and wires for alarm and signalling systems	401	Risk phrases according to EH40	432
Cables and wires in data networks	402	Safety phrases according to EH40	433
Wires for ELV lighting	403	Handling of electronic waste products	434
Codes for colour marking of power cables	404	European and international organisations and terms of standardisation	435
Cables for power distribution	405	Important DIN and IEC standards	436
Connectors in power engineering	406	Important VDE regulations	438
Connectors	407	Glossary	439
RJ45 and RJ11 connectors	408	Subject index	444
Audio connectors	409	Web addresses of companies and organisations	454
Cable conduits	410	Supporting companies and organisations	456
Nomenclature and samples of screws, bolts and nuts	411		
Metric ISO threads	412
